

Manual Testing Assessment

Question 1:

You have a shoe-selling e-commerce platform. Now, the client wants to implement a new feature "Search". During the client meeting, they mentioned they wanted to make the search dynamic, with any keywords, or specific text. Now you have a chance to get into more details on the feature. You can ask 10 questions to the client. List the questions according to priority.

List of questions for client:

1. What specific search criteria do you want users to be able to filter by?
2. Should the search be limited to certain sections of the website or is it universal?
3. Do you want real-time suggestions (autocomplete) as users type their queries? If so, what kind of data should be displayed in these suggestions?
4. How do you want to handle misspellings or close matches in search queries? Should there be a "Did you mean" feature?
5. What should be the behavior when no results are found? Should we suggest related products or categories?
6. Do you want users to search by multiple keywords at once? How should the platform prioritize multiple keywords?
7. How should the results be ranked? Do you have preferences for prioritizing specific products?
8. Are there any specific characters or symbols that should be handled in the search (e.g., special characters, numbers, etc.)?
9. Do you want search results to update instantly, or should they only display after the user submits the search?
10. How do you plan to measure the effectiveness of the search feature (e.g., search accuracy, conversion rate, or engagement metrics)?
